# Overview

INETCO Insight™ 4.6.2 is a full release of INETCO Insight that provides the following enhancements and fixes not found in INETCO Insight 4.6.1.

## System Enhancements

The following enhancements have been made:

- Windows Server 2008 support.
- NTLM LDAP authentication support.
- LDAP configuration support of Active Directory forest hierarchies.
- A bug was fixed whereby history data beyond 8 days was not always deleted.

## Decoding and Correlation

The following enhancements have been made:

- ANSI X9.2 Network Management message correlation.
- The ability to detect data NAK errors on transactions.
- A bug was fixed whereby the TPDU NII was reported incorrectly if the terminal ID within a TPDU message was not set to the type “AS 2805”.

## Web Interface

The following enhancements have been made:

- The ability to do “Inquiries” over a 2 hour time span.
- Reduced time to save configurations with a large number of alerts.

## Reporting

The following enhancement has been made:

- A bug was fixed whereby transactions containing encrypted data were not always stored in the Reporting database.

## Configuration

The following enhancements have been made:

- Custom configuration support has been added to monitor transactions which split their request and response message over different TCP sessions. Configuration of this option must be done in consultation with INETCO Support.
- A problem was fixed in the interpretation of address ranges when specifying “Link Configuration” and “Grouping Configuration”.
